

### Facts

- ✓ Carefully Kiln Dried in automated process
- ✓ Effective for both interior and exterior use
- ✓ Finger Jointed from blocks 100% free of defects
- ✓ 1 coat oil based primer, 2 coats latex buffed twice, sanded with 150 grit paper

## B&C Trimboards

### Base Substrate

- Finger Jointed 100% defect free
- Kiln dried on automated process to assure an average moisture content between 10% and 12%
- **Exterior** Franklin adhesive for finger jointing and EPI that is water borne dispersion based adhesives for edge gluing. EPI adhesive is based on special quality dispersions, which together with an isocyanate hardener provide high quality and performance bonding.

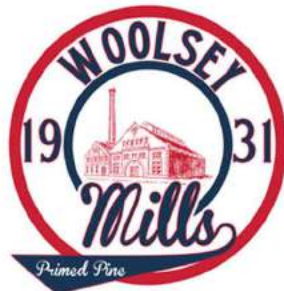

• The glue joint fulfill the requirements according to SS-EN-204-D4 as well as the JIS K6806, type 1, for use in production according to JAS MAFF No.1152, exposure class C.

• The joint also has good resistance against creep and constant load. EPI adhesives 1972/1992 has fulfilled ASTM D5751 for edge glue with radiata pine as well. Neither the EPI Adhesive 1972 or 1989 nor the hardener 1992 contains any added formaldehyde.

### Priming

- B&C Trim Boards are primed with a permanent waterproof oil base primer to assure a better protection of the substrate against water from top coat.
- After the oil base, we cover the product with two coats of latex primer in an automated process in our factory.
- In order to assure a good coverage and protection we primed all 6 faces of the boards.
- Oil based primer as a first coat, prevents that any kind of water from latex top coats touch the wood, avoiding common defects as raised grain.

Nominal (Inches)	Specs	
	Length (ft)	Net Size (Inches)
1 x 4	16'	23/32 x 3-1/2
1 x 6	16'	23/32 x 5-1/2
1 x 8	16'	23/32 x 7-1/2
1 x 10	16'	23/32 x 9-1/2
1 x 12	16'	23/32 x 11-1/2
5/4 x 4	16'	1-1/8 X 3-1/2
5/4 x 6	16'	1-1/8 X 5-1/2
5/4 x 8	16'	1-1/8 X 7-1/2
5/4 x 10	16'	1-1/8 X 9-1/2
5/4 x 12	16'	1-1/8 X 11-1/2
1 x 6	16'	T&G ECB
